

Suspected duplicates and replayed events

Purpose

Separate repeated presentation, duplicated messages, repeated requests and distinct confirmed operations. Two entries in a view are not sufficient evidence of duplicate processing. This guide applies across authorization, capture, refund and delivery, with the responsible stage owner confirming its own operation.

Payment Operations builds the identity comparison. The Lifecycle Owner owns intent lineage; stage owners own final acknowledgements. No corrective payment, refund or event replay is executed by the copilot.

Document control	Value
Key / version	RB-103 / 1.0.0
Document ID	ace233b4-5dd8-4ae6-89de-c39be100c5ce
Owner	Payment Lifecycle Owner
Tenant ID	8b860d80-d17f-4e6b-8c48-af35f26a4d61
Status / effective	APPROVED / 2026-10-01
Approver	Knowledge Approver (fictional role)
Scope	authorization, capture, refund, delivery
Risks / sources	R03, R04, R11, R14 / E02, E03, E04, E05, E06, E08

Synthetic notice: All systems, records, roles and amounts are fictional. Guidance is advisory and never executes an action.

Compare operations rather than appearances

Comparison sequence

1. Obtain E02 for the same tenant and intent. Group by logical operation type, request and idempotency key; preserve canonical payload identity. The same key with a changed payload is a conflict, not a legitimate second operation.
2. Compare final downstream IDs from E03, E04 or E06, according to stage. Several local retries may refer to one downstream operation. Different operation IDs require intent linkage before concluding that duplication was unintended.
3. For displayed holds, obtain E05 and linked E04 capture confirmations. Distinct active holds, consumed authorization and confirmed captures have different effects.
4. For notifications, use E08's event ID, operation link and recipient acknowledgement. A duplicate event may be a repeated delivery of one operation; arrival order does not identify which payment state is authoritative.

Discriminating checks

Comparison	Direction
Same operation ID, repeated event ID	Investigate delivery/projection duplication; do not infer another capture
Same intent, distinct confirmed stage operations	Compare requests and amounts; investigate unintended repetition
Two holds without capture confirmation	Investigate hold/attempt linkage, not completed duplicate payments
Missing canonical payload or acknowledgement	Preserve uncertainty; request the missing identity/result source

Exclude foreign tenants, unrelated intents and partial snapshots. Do not deduplicate by amount/time similarity alone: two legitimate partial operations may have equal amounts, while one repeated operation may appear with inconsistent projections.

Containment and owner review

Conditional response

For projection-only duplication, the Delivery Owner reviews consumer state and acknowledgement behavior using RB-108. Do not replay events until the original recipient result is known. For confirmed unintended repeated operations, the stage owner reviews separately authorized recovery with PL-102 amount headroom. Never automatically refund the apparent excess or delete a source record.

If a new-key retry preceded an uncertain first outcome, identify both operations and suspend further advisory retry direction pending owner confirmation. Advice must state which comparison distinguishes one repeated delivery from two actual operations. Missing linkage remains a gap rather than an inferred common intent.

Validate and retain

Retain the identity matrix, source snapshot IDs, coverage, confirmed/pending sums, alternative explanations and operator review. Validation after any authorized correction compares affected operations and recipient state separately. A cleaned display is not evidence that a payment operation was reversed. Preserve immutable history; rollback of a projection change must not remove earlier acknowledgements.

Source availability

E02-E08 here are future read-only requirements. Current aggregate errors cannot prove duplication, and an alert title is not identity evidence. Degraded/empty report evidence retains LOW/null Q6 behavior.
