

Webhook delivery and recipient acknowledgement

Scope

Investigate lost, duplicated or reordered synthetic notifications and exhausted delivery attempts. Delivery acknowledgement establishes receipt only; it does not establish payment success or correct recipient projection state.

The Delivery Owner owns attempts and acknowledgements. The responsible payment stage owner supplies authoritative outcome if needed. This guide does not replay events, bypass authentication or change a recipient system.

Document control	Value
Key / version	RB-108 / 1.0.0
Document ID	ba3ad5a3-452c-4e5b-b9ee-715e03368af1
Owner	Delivery Owner
Tenant ID	8b860d80-d17f-4e6b-8c48-af35f26a4d61
Status / effective	APPROVED / 2026-10-01
Approver	Knowledge Approver (fictional role)
Scope	delivery, cross-stage
Risks / sources	R14, R15, R03, R19 / E02, E08, E10, E11

Synthetic notice: All systems, records, roles and amounts are fictional. Guidance is advisory and never executes an action.

Separate event delivery from operation truth

Read-only sequence

Obtain E08 event ID, tenant, linked operation, attempt IDs, attempt results and recipient acknowledgement. Several attempts may carry the same event. Distinguish a unique event from a unique operation; E02 helps establish the operation lineage but does not establish the final payment result.

Compare source sequence/version with received order. A later-arriving older event can explain a stale recipient view without a new payment failure. Request E10's effective retry budget/backoff and delivery policy. Exhaustion means the configured budget ended; absent acknowledgement may still conceal successful receipt. Use E11 bounded connectivity/access observations to narrow hypotheses, without exposing credentials or treating overlapping failures as a proven cause.

Diagnostic branches

Observation	Required comparison
Duplicate delivery	Same event ID versus distinct operation IDs; recipient handling must be checked separately
ACKNOWLEDGED but stale view	Recipient projection/version versus authoritative stage record
EXHAUSTED without acknowledgement	Effective budget and original recipient outcome before replay review
Out-of-order arrival	Source sequence within its stream; cross-source time alone is insufficient

A missing acknowledgement is not a negative acknowledgement. Complete-empty queries need correct event/window coverage. Do not infer payment failure from a delivery error. Source disagreement remains visible until identity/order can be resolved by the appropriate owners.

Replay is a separately controlled action

Conditional response

The Delivery Owner may review replay only after establishing original recipient outcome, event identity, duplicate handling and applicable policy under PL-102. Unknown receipt should prompt confirmation recovery rather than blind replay. An access failure supports authorized access review, never disabling validation or posting credentials into evidence.

For stale recipient state, obtain the responsible stage confirmation and compare projection lineage. Guidance can identify that missing comparison without asserting a payment cause. Define owner, event scope, approval and stop conditions before any separately authorized replay or consumer change.

Validate and preserve

After an authorized change, verify receipt and recipient projection separately; both must refer to the exact event/operation. Preserve original attempts and acknowledgements. Rolling back a consumer configuration cannot retract a delivered event, and deleting history is not a valid duplicate-removal procedure.

Retain event/attempt matrix, effective budget, source versions, acknowledgement gaps and competing explanations. E02/E08/E10/E11 are future read-only requirements; current aggregate errors cannot establish delivery state for a specific event. Degraded/empty report inputs keep Q6 LOW/null fields.
