

Reconciliation without invented corrections

Use and limits

Investigate a mismatch only after establishing comparable, complete inputs. Differences may result from cutoff, membership, duplicated events, omitted records, pending outcomes or genuinely conflicting confirmations. A mismatch never authorizes a balance correction.

The Reconciliation Owner owns the comparison; stage owners confirm their records. Every amount is synthetic SYN_UNIT. Do not add fees, exchange or real bank settlement assumptions to make two totals agree.

Document control	Value
Key / version	RB-109 / 1.0.0
Document ID	4f536824-87bf-4bd0-bad3-04bcbacff40f
Owner	Reconciliation Owner
Tenant ID	8b860d80-d17f-4e6b-8c48-af35f26a4d61
Status / effective	APPROVED / 2026-10-01
Approver	Knowledge Approver (fictional role)
Scope	capture, refund, settlement, reconciliation
Risks / sources	R07, R11, R13, R16, R17, R21 / E02, E04, E06, E07, E09, E10

Synthetic notice: All systems, records, roles and amounts are fictional. Guidance is advisory and never executes an action.

Establish comparability before totals

Comparison sequence

1. Obtain E09 input source/snapshot IDs, tenant, covered interval, cutoff, membership, pagination and completion status. If any input is partial or missing, classify the comparison as incomplete; retain the observed difference without claiming a confirmed financial discrepancy.
2. Use E10 effective cutoff/unit rules. Compare the same closed E07 membership version when settlement is involved. Different cutoffs or open membership may explain a difference and must be excluded before causal interpretation.
3. Trace E02 intent/request lineage into E04 captures and E06 refunds. Count unique logical operations; preserve confirmed versus pending/unknown exposure separately. Two messages for one operation must not be counted as two payments.
4. Compare record-level membership before amount sums. Record missing/extra IDs and inconsistent outcomes with both source references. Similar totals can hide different membership; a zero difference is not sufficient evidence of correctness.

Interpretation

Finding	Required next evidence
Different cutoff or partial input	Complete aligned snapshots; no correction advice yet
Repeated events with same operation	Identity/consumer comparison, not refund of a presumed duplicate
Distinct confirmed operations differ	Stage-owner confirmation and amount/headroom review
Contradictory final outcomes	Both immutable versions plus responsible source-owner review

Do not pick the newest timestamp automatically or force a balance by dropping an inconvenient record. A complete empty source result remains scoped to that query and does not prove absence from every system.

Escalation and controlled resolution

Owner package

Retain input IDs, membership versions, exact cutoffs, units, coverage, record-level differences and confirmed/pending totals. Name competing mechanisms and the smallest discriminating source. The Reconciliation Owner coordinates with Capture, Refund or Settlement Owners rather than converting a comparison into payment truth.

Conditional recovery

For projection/duplication defects, an owner may separately authorize a bounded projection correction after confirming authoritative operation identity. For a genuine source conflict, keep the result unresolved until the responsible owner provides authoritative explanation. Direct balance changes, automatic refunds and deletion of source history are outside the copilot's authority.

After authorized changes, rerun the comparison with documented compatible snapshots and compare both membership and totals. Preserve the before/after runs. Rollback must restore the projection/configuration scope without erasing confirmed operations; new payment operations require separate authorization and identity.

Capability and closure

E02/E04/E06/E07/E09/E10 are future read-only source requirements. Current aggregate errors cannot establish a balanced ledger or a transaction discrepancy. Closure may explicitly remain incomplete/conflicting; degraded/empty reports retain Q6 LOW confidence and null cause/recommendation.
